5. Defect log 7

6. UAT summary 7

1. Introduction

This plan explains how the client will check, with their own workbooks, that the MR11 System does what the Software Requirements Specification says. It covers how testing is organised, what the developers have already checked, the 36 test cases for user acceptance testing (UAT), and where to record any problems.

Before handing the system over for UAT, the developers ran their own checks on 21 October 2026. The type check and production build passed, and 23 of the 24 API checks passed. The one failure is a known issue: a workbook uploaded through the browser can't be downloaded back.

2. How testing is organised

Item	Plan
Environment	A separate staging copy, meaning a Vercel preview deployment with its own Supabase project, so testing never touches live data
Test data	The latest real workbook from each department, plus a set that is a month old, to check that history carries forward correctly
Testers	One named person from each department, the CEO or someone standing in for them, and the client's administrator
Accounts	One account for each role, created by the administrator in Admin Permissions
Recording problems	Each failure is recorded in section 5 with the test ID, the steps taken, a screenshot, the workbook used and the time
Ready to start when	Staging is deployed, `/api/health/db` shows CONNECTED, and every tester has an account and their workbook
Finished when	Every test case has been run, no Critical or High defects remain open, and the client has signed the Project Sign-off and Closure Report

2.1 How serious a defect is

Severity	What it means	Example
Critical	The system can't be used, and there is no way around it	Nobody can sign in, or uploads are lost
High	Business figures or access rights are wrong	Total Processed is wrong, or a user can see another department's workbook
Medium	A feature works, but only with a workaround	A filter leaves out one of its values
Low	Cosmetic	Alignment or wording

3. What the developers have already checked

These checks were run on 21 October 2026 against commit `0cc8c36`, on a local server in demonstration mode, with the sample workbooks and no database.

Check	Result
`npm install`, `npm run lint` (TypeScript) and `npm run build`	Passed. The frontend bundle is 640 KB (200 KB compressed) and the API bundle is 200 KB
`/health`	Passed, returning `status: ok`
Signing in with a valid account, a wrong password and an unknown email	Passed, returning a token, `WRONG_PASSWORD` and `USER_NOT_FOUND`
Calling the API with no token, and with an invalid token	Passed, returning 401 and 401 `INVALID_TOKEN`
Building the MR11 from the sample workbooks	Passed, with 10 rows, status READY and 78 columns
Live market data	Passed. USD to MYR was 4.0835 from Bank Negara Malaysia, and the LME aluminium cash price was USD 3,003.50 per tonne, both as of 20 October 2026
A BD user opening their own department, then the Finance department	Passed, returning 200 and then 403
A BD user calling Admin, the CEO summary and row delete	Passed, returning 403 each time
A Finance user uploading to BD, then a BD user uploading to BD	Passed, returning 403, then 200 in 0.35 seconds with the MR11 rebuilt
Uploading with no file	Passed, returning 400 `FILE_REQUIRED`
The CEO opening the CEO summary, then a department	Passed, returning 200 and then 403
Password rules (under 8 characters, and the same as the current password)	Passed, returning 400 `WEAK_PASSWORD` and `SAME_PASSWORD`
Exporting the MR11 to Excel	Passed, producing a 12.5 KB .xlsx file
Planning series history	Passed, with 13 series
Downloading a workbook that was uploaded through the browser	**Known issue**, returning 404 `FILE_NOT_FOUND`

These checks didn't cover the screens in a browser, or saving to Supabase, because no database was connected. UAT covers both.

4. UAT test cases

For each case, testers write Pass, Fail or Blocked in the Result column, and add the defect ID in Notes when a case fails. The Req column shows which requirement in the SRS each case proves.

ID	Req	Steps	Expected result	Result	Notes
UAT-01	AUTH-01	Sign in with your own account	The MR11 page opens, and the sidebar shows your pages		
UAT-02	AUTH-02	Sign in with a wrong password, then with an unknown email	You see "Wrong password", then "No account found for this email"		

ID	Req	Steps	Expected result	Result	Notes
UAT-03	AUTH-04, 05	Change the default password, sign out, then sign in with the old password and then the new one	The amber reminder disappears, the old password fails and the new one works		
UAT-04	AUTH-05	Try a new password that is 7 characters long	It is refused with "at least 8 characters"		
UAT-05	AUTH-06	Sign out, then press the browser's Back button	The sign-in page shows, and no data is visible		
UAT-06	AUTH-07	As a BD user, type /departments/FINANCE into the address bar	You are taken back to the MR11 page		
UAT-07	DEPT-03	Sign in as a Shell Plan user, then as a Design user	Both of them see the Shell Plan & Design page		
UAT-08	AUTH-07	Sign in as the CEO	The CEO Executive Hub and the MR11 are visible, but no department pages or Admin Permissions		
UAT-09	DEPT-02, 06	As BD, upload the latest workbook	Success, and the page shows the file name, the uploader and the time; the MR11 is updated		
UAT-10	DEPT-02	As Finance, upload the latest workbook	As for UAT-09		
UAT-11	DEPT-03, 08	As Shell Plan & Design, upload the combined workbook	As for UAT-09, and the approval history lists the approvals		
UAT-12	DEPT-08	As Planning, upload the workbook	As for UAT-09, and the Series Ledger lists the series		
UAT-13	DEPT-08	As Production, upload the workbook	As for UAT-09, and the series history is updated		
UAT-14	DEPT-04	As Dispatch, upload the Local file and then the Overseas file	Each upload replaces only its own file, and both stay listed		
UAT-15	DEPT-05	Upload a .csv file or a damaged file	An error appears, and the previous workbook stays active		
UAT-16	DEPT-01, 07	Open each department page	The colours, merged cells and date headers match the Excel file		
UAT-17	MR11-01	Count the MR11 rows and the BD rows that contain data	The two counts match		
UAT-18	MR11-04	For three sample projects, compare the Finance columns with the Finance file	The values match		

ID	Req	Steps	Expected result	Result	Notes
UAT-19	MR11-05, 06	For three projects, check the Shell Plan status, the Design status and the colours of the completion dates	The values and colours follow the rules in the User Guide		
UAT-20	MR11-07	For three projects, check Total Processed and Processed Date	Total Processed is the sum of Cumulative Processed for the row's blocks, and the date is when it last changed		
UAT-21	MR11-08	For three projects, check Total Produced and Produced Date	Total Produced is the sum of Cumulative Produced, and the date is the latest day with output		
UAT-22	MR11-09, 10	Check the Dispatch columns for one Local and one Overseas project	The totals match; the Overseas project shows ETD/ATD and the Local one shows "Delivered:"		
UAT-23	MR11-11	Find a Re-Design Only row (in blue font)	Its Production and Dispatch columns show "-"		
UAT-24	MR11-12	Check the month columns and the yearly totals for two projects	Months that have ended show the actual m² dispatched, and later months show the forecast		
UAT-25	PRICE-01 to 03	Check one Variable, one Fixed and one Freeze LME row	LME Adjusted is (LME minus rate) divided by 1,000 and multiplied by 21.5, then 0, then "Check", and the Final Selling Price adds up		
UAT-26	MR11-15	Use search, filters, column groups, zoom and full screen, then reload the page	Each one works, and your settings are remembered		
UAT-27	MR11-17	Export the MR11 and open it in Excel	The two-row header, colours, merged cells and number formats match what's on screen		
UAT-28	MR11-18	As an administrator, delete a row and then restore it	The row leaves the MR11, appears under Deleted rows, and comes back when restored		
UAT-29	MR11-19	Click Sync	The MR11 is rebuilt and the figures don't change		
UAT-30	CEO-01	Choose a region and a month, then compare the stage totals with the MR11	The totals match		
UAT-31	CEO-02	Open the pipeline for the current month	It shows the BD forecast, Design, Processed, Produced and Dispatched, with Re-Design Only shown separately		
UAT-32	ADMIN-02	Create a user with a department preset, then sign in as that user	They see only that department and the MR11		

ID	Req	Steps	Expected result	Result	Notes
UAT-33	ADMIN-03	Change that user's roles, then have them sign out and sign in again	Their new access applies after the new sign-in		
UAT-34	ADMIN-04	Delete that user, then try to delete the main administrator	The deleted user can no longer sign in, and the main administrator is protected		
UAT-35	Quality	Upload in one browser, then open the MR11 in another browser as a different user	The second user sees the new data after refreshing		
UAT-36	Quality	Ask IT to redeploy the system, then sign in again	Users, workbooks and the MR11 are all unchanged		

5. Defect log

Defect ID	Test ID	Severity	Description	Raised by	Status	Fixed in
